

Accident Reconstruction Professional 7

We've even got VIDEO HELP FILES on the CD!

AR Pro 7 running in Microsoft Windows 7.

Accident Reconstruction Professional 7

This program has been well endowed with the formulas, options, and capabilities you need to get your job done quicker, easier, and more accurately than ever before.

AR Pro has all the basic formulas you'll need (Speed, Velocity, Time, Airborne, Distance, Energy, Accel. and Drag Factors, all the famous Pedestrian formulas, Motorcycle, Crush, Momentum [and our 360° Momentum creates and prints a beautiful Vector-Sum Analysis for you, even in color!], Truck, etc.).

We also have some other formulas for the more difficult tasks: Truck Braking Efficiency (and you can leave your Pushrod Force Charts on the shelf... you won't need them with AR Pro), a multiple departing section 360° Momentum formula (with up to 8 departing sections), Photogrammetry, Low Speed formulas, and much, much more.

Of course, there is a lot more to a good Reconstruction program than just formulas... AR Pro has a built-in Vehicle Database that has virtually every car and light truck on the road since 1971. The database has the information that you'll need, when you need it, like: curb weights, overall length, overall height, overall width, just to name a few. And, of course, the database is directly accessible by the formulas that need it!

Our reports are something you have to see to believe. The formula reports show every step of the mathwork

involved in arriving at a final answer, and the mathwork looks like something right out of a textbook. You can even print them in full color.

Many times, you can calculate needed inputs for a formula by pressing a "Calc" button next to the input, as illustrated in the above screenshot.

Built-in calculator and calendar, new updated look, a fully automatic and user-specific "most recently used formula" list, push button access to your existing word processor and CADD program as well as our own Recall and TSB programs, spell checking where you need it, and it's even Internet and e-mail enabled.

In summary, it just doesn't get any better than this!
